

Digiwage

Decentralized Freelance Marketplace

welcome to the

FUTURE

Digiwage Mission:

Empower global crypto commerce through decentralized execution.

Digiwage Vision:

Become the preeminent freelance marketplace and exchange for decentralized global crypto commerce.

The Digiwage Marketplace

Welcome to Digiwage – THE marketplace for commerce of talents. Digiwage is a central location for decentralized execution of knowledge, skills, and resources. The Digiwage coin itself is a Proof of Stake (PoS) cryptocurrency with a current supply of 34 Million coins. With this coin, we have created a new standard for entrepreneurs, individuals, and businesses. What originally started as a simple marketplace for decentralized work has evolved into a platform for commerce. For those of you that have been following Digiwage from the beginning, we've got some exciting developments ahead.

The foundation of Digiwage is centered around the Digiwage marketplace, a location for anyone to bring their talents and transact them on our platform. Our mission is to empower global commerce through decentralized execution, and we've enabled that in the past through our core product – the marketplace. The marketplace is open to people around the world to list their skills and services for payment. The Digiwage platform is now home to hundreds of individuals listing their services, and is poised to reach the tens of thousands over the coming months.

Upcoming Changes

The Digiwage team is excited to announce that over the coming weeks, we will be implementing a series of improvements to align with our mission of empowering global commerce of talent through decentralized execution. Our team recognizes that while Digiwage is capable of becoming a mainstream currency, a few features need to be added. Therefore, we are including the following features:

1. **UI Redesign:** Complete redesign of the digiwage.org user interface. This will improve navigational features, ability to browse and list talents, and support ease of access to new users. This is necessary for continued mainstream adoption.
2. **Payment Processor:** Digiwage will provide a payment portal for corporate organizations to begin accepting payment in Digiwage. This means that companies and organizations can begin accepting payment in Digiwage by implementing our payment portal on their sites. This will enable consumers to pay in Digiwage or any other cryptocurrency. Digiwage already has multiple companies registered to begin incorporating our payment portal and our partnership with those companies will be announced in a press release in the coming weeks via a mainstream American newspaper.

3. **Cryptocurrency Conversion:** In order to support global commerce on our marketplace, Digiwage is building an exchange to support ANY cryptocurrency to WAGE pairing. This exchange will enable our marketplace users to accept and send payments in any cryptocurrency, through Digiwage. Users will be able to send anything, to include BTC, LTC, ETH, etc. to our platform and that will convert to Digiwage. This will both encourage mass adoption of Digiwage and use of the marketplace. Visitors to the marketplace will be able to spend any cryptocurrency they like as long as they are paired with WAGE.
4. **Digiwage Exchange:** To support the acceptance of any cryptocurrency on the Digiwage marketplace, we are building an exchange dedicated to exclusive WAGE pairings with other cryptocurrencies. This is going to be a completely separate entity, and users of the exchange will be able to stake their coins, much like other exchanges allow now. WAGE will be able to be paired with any other cryptocurrency.
5. **Cryptocurrency Payment Listing:** In order to enable other cryptocurrencies on the Digiwage marketplace, they will need to be listed on the exchange. Cryptocurrencies that wish to pair with Digiwage for marketplace usage will be done so via request of the Devs. Coins that opt to list on the Digiwage exchange will increase their visibility and application by listing.

6. **Android/IOS Application:** Once the backend features required to support universal commerce exchange are in place, we will develop dedicated applications for both platforms for use globally.
7. **Universal Incubator:** Digiwage will become the home for all decentralized commerce by becoming an incubator for startups. Employees around the world are forced to work within a box defined by entrenched power players within their respective industries. The Digiwage team recognizes that there is an incredible amount of inefficiency in how large corporations manage internal innovation or novel ideas. By Digiwage becoming the home for decentralized commerce, employees within those larger institutions can take their ideas to the Digiwage marketplace and enact the change they want to see.

By addressing these core pillars, Digiwage will become the preferred location for freelancers, entrepreneurs, and even larger institutions to accomplish grandiose problem sets.

About Us

The world is a constantly growing, adapting, and evolving ecosystem. Technology has advanced at such a rapid pace that we've found ourselves continually redefining what to expect from life. With the advent of blockchain, the ever-expanding network of connections, and the reliance on technology increasing daily, we've created a set of ripe conditions for unheralded societal transformation. How we conduct business today versus 10 years ago is nearly unrecognizable. Buying on the internet has become a staple of the economy, payments are mostly transmitted digitally, and the internet dependence has reached an all-time high. With relationships getting closer and processes becoming more decentralized, the time has come for the next lifestyle evolution – a decentralized platform to enable entrepreneurs, individuals, and businesses to connect and innovate in an entirely new way. We all want more autonomy in our lives, to choose who we work with, and the projects that we associate ourselves with, which is exactly why we created Digiwage – THE marketplace for decentralized commerce.

Who we are

Digiwage began with an ideal of independence, mastery, and purpose, so that our community could opt into the life they desired, surround themselves with like minds, and work with people they preferred. The project began with a single blockchain enthusiast and quickly burgeoned into a massive team. The idea spread like a contagion and quickly attracted some of the most successful minds in their respective fields. After starting from humble beginnings as an army of one, Digiwage has blossomed to a highly qualified team of 12. Across the board, we've got a diverse background of education and talents. The majority of Digiwage's team is tech centric – with 7 having received degrees in science and computing fields, with the rest receiving education in other complimentary areas. In addition to traditional education, the team has a combined 30 years' experience in crypto. While we're a team of 12 for the moment, the team will likely have grown larger by the time you read this. We're a team driven and motivated by technological innovation and workplace improvement.

The Future of Decentralization on Blockchain

Blockchain is inherently a decentralized technology. The ledger encourages accountability and individual autonomy. This sort of decentralization and continuity of accountability can help solve some of the world's most grandiose problems. This is due to the fact that blockchain is such an incredibly efficient mechanism for most applications across a multitude of industries.

Digiwage has recognized that there is an inefficiency problem in the innovation and startup community, and we're stepping up to provide a solution. Industry leaders have a stranglehold on each of their respective markets, and have caused incredible amounts of groupthink, preventing innovation and broad evolution. We're bucking this trend – fostering a place and climate that encourages a meritocratic, free thinking reward based system.

Continued...

In our current capitalist marketplace, entrenched market leaders dictate the flow of progress and whom to hire, and at what rate. The best ideas rarely surface to the top, given that these market leaders have firmly established their dominance and prevent change from occurring. With Digiwage, we allow for the idea meritocracy to flourish. People from all backgrounds will have the ability to do what they see best, and find suitors for their ideas. The best part – they get paid in whatever they choose.

Digiwage is creating the alternative to employment. We're creating the marketplace for freedom and innovation. Decentralization will allow for the best possible innovation in the future.
